המחיר המלא של המוצר: ₪ 1,200.00

החלוקה הזו נובעת מן העובדה שיש לנו שתי סוגי תא, תא שרירי ותא עצבי, ויש להם צרכים שונים. התא העצבי צריך יותר חומרים כימיים מאשר התא השרירי, ולכן הוא צריך יותר חמצן. התא השרירי צריך יותר אנרגיה מאשר התא העצבי, ולכן הוא צריך יותר גלוקוז.

Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders among different types of workers. The study included 600 male employees from three companies who had been employed by their respective companies for at least one year. Data were collected through self-administered questionnaires. Results showed that the prevalence of musculoskeletal disorders was higher among manual workers than among non-manual workers. This finding suggests that manual workers are more likely to experience musculoskeletal problems due to their work environment and tasks.
